halide emulsion layer, at least one cyan color-forming lightsensitive silver halide emulsion layer, at least one magenta
color-forming light-sensitive silver halide emulsion layer, and at
least one light-insensitive non-color forming hydrophilic colloid
layer, wherein at least one cyan color-forming silver halide
emulsion layer contains at least one cyan dye-forming coupler
selected from the compounds represented by the following formula
[C-2], and at least one light-insensitive non-color forming
hydrophilic colloid layer is positioned between the support and a
light-sensitive silver halide emulsion layer most adjacent to the
support:

wherein  $R^1$  represents an electron attractive group having a Hammett's substituent constant  $\mathcal{O}_p$  value of 0.20 or more,  $R^{11}$ ,  $R^{12}$ ,  $R^{13}$ ,  $R^{14}$  and  $R^{15}$  which may be the same or different, each represents hydrogen atom or a substituent,  $R^3$  represents hydrogen atom or a substituent,  $R^3$  represents hydrogen

Application No.: 09/468,538

necessary for forming a 5-, 6-, 7- or 8-membered ring, and  $\rm X^2$  represents hydrogen atom or a substituent,

wherein at least one non-color forming hydrophilic colloid layer positioned between said support and a light-sensitive silver halide emulsion layer most adjacent to the support contains a solid fine particle dispersion of a dye represented by formula [I]:

 $\dot{\mathbf{p}}_{-}(\mathbf{X})_{\mathbf{y}} \qquad [\mathbf{I}]$ 

wherein

D represents a compound residue having a chromophore,

X represents a dissociative hydrogen atom or a group having a dissociative hydrogen atom, and

y represents an integer of from 1 to 7.
